Matadero Creek Remediation As part of a multi-discipline team led by Schaaf & Wheeler Consulting Civil Engineers, Lowney Associates is in the process of completing geotechnical and environmental services for the remediation of the Santa Clara Valley Water District's Matadero Creek in Palo Alto. The project consists of channel modifications to provide increased flood protection. Improvements may include raising the floodwalls, constructing a U-frame section channel with a depressed fish passage, and bridge modifications to a crossing of Matadero Creek. Additionally, we are providing consultation services for areas downstream of Highway 101.
