\$31 Million Remediation Contract Lowney Associates is providing geotechnical engineer of record services for a TRC \$31.3 million Exit Strategy® contract. TRC was retained by a group of industrial clients for the remediation and closure of the former 88-acre GBF/Pittsburg Landfill. TRC's Exit Strategy® program allows clients to outsource their environmental compliance obligations forever by fully transferring the liability risk to TRC. For the GBF/Pittsburg Landfill, TRC contracted to remediate environmental impacts caused by the landfill, implement a final closure, and provide ongoing landfill maintenance and monitoring. Lowney, a TRC company, is providing geotechnical and geologic consultation and support for the design and construction of the on-site soil borrow area and storm water detention basin. A comprehensive insurance and risk management program was structured with AIG Environmental. In addition to insuring against potential cost increases, TRC also provided financial assurance, as required by state agencies.
