

CLIENT BENEFITS:

- Due to our database of boring logs and knowledge of subsurface conditions at Menlo-Atherton High School, we were able to complete our geotechnical investigation with fewer borings, saving time and costs.
- Lowney previously completed a geologic and seismic hazards evaluation for the Menlo-Atherton campus, enabling us to update the evaluation for the aquatic center cost-effectively.

Menlo-Atherton High School Improvements

Lowney Associates completed geotechnical engineering services for Menlo-Atherton High School's new aquatic center. In addition, Lowney was retained to provide geotechnical engineering services for a planned 19,000-square-foot, 30-foot high, single-story sports complex including a basketball gymnasium, wrestling gymnasium, weight room, and aerobics room. Additional work will include exterior paved parking and driveways and underground utilities for Sequoia Union High School District. ■
