provided by Lowney
Associates for this
project, please call.

Moffett Park Lowney Associates is providing geotechnical services for a Moffett Park development by Jay Paul Company in Sunnyvale. The development consists of the construction of four 4-story steel-framed office buildings, each containing approximately 160,000 square feet. Additional improvements on-site will include a reinforced concrete two-level parking structure. Lowney Associates used conventional borings and CPT probes to provide information on the subsurface soil and ground water conditions. The buildings will be located adjacent to and within the footprint of the former Lockheed-Martin Building 104, which has been demolished; the building materials are being recycled on-site. Concrete from Building 104 is being crushed and recycled as shown above.
