North Park Residential Development Lowney Associates was retained by Irvine Apartment Communities (IAC) to provide geotechnical services for the construction of one of California's largest apartment complexes. Approximately 2,700 units in high-density, four-story structures over one level of partially subterranean parking are planned at the 60-acre site. IAC is using several architecture firms, including Fisher Friedman Associates, Backen Arrigoni & Ross, ROMA Design Group, McLarand, Vasquez, Emsiek & Partners, and Thomas P. Cox Architects to design the buildings with various styles. Lowney continues to support the development's evolving plans with on-call geotechnical services. Lowney also is providing observation services during construction.
